## **DETAILED ACTION**

### **Allowable Subject Matter**

1. Claims 1-15 are allowed.
2. The following is an examiner's statement of reasons for allowance: The Applicant filed an amendment received on December 15, 2003. In this amendment, the Applicant amended the claims and specification and provided an abstract. No new matter was introduced.

### ***Specification***

3. Regarding the specification, the proposed changes are approved. The new abstract is also approved and the previous objection to the specification is withdrawn.

### ***Response to Arguments***

4. Regarding independent claim 1, Applicant's arguments are persuasive. A review of prior art failed to make obvious, disclose or fairly suggest a mass spectrometer wherein said first vacuum region is characterized by a pressure intermediate said initial pressure and said second vacuum region pressure and the set of quadrupole fringe electrodes are configured to divert the ion beam prior to passage of the ion beam into the linear quadrupole mass analyzer and to shield the linear quadrupole mass analyzer entrance from a substantial portion of the trajectory of the ion beam in said first vacuum region in addition to the accompanying features of the claim.

Claims 2-15 are allowed by virtue of their dependence upon claim 1.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

### ***Conclusion***

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. U.S. Patent 6,614,021 to Kalinitchenko describes an ion optical system for a mass spectrometer with a source, at least one electrode for directing a beam of ions in a first direction and at least a second electrode for diverting the beam through an angle whereby neutral particles and photons from the source are separated. European Patent Application EP 0 237 259 describes a mass spectrometer with a source and electrodes for diverting an ion beam.

However, these references are silent with respect to said first vacuum region characterized by a pressure intermediate said initial pressure and said second vacuum region pressure and the set of quadrupole fringe electrodes are configured to divert the ion beam prior to passage of the ion beam into the linear quadrupole mass analyzer and to shield the linear quadrupole mass analyzer entrance from a substantial portion of the

Art Unit: 2881

trajectory of the ion beam in said first vacuum region in addition to the accompanying features of the claim.
